Mr. M.A NEHRU EDWIN RAJ<sup>1</sup> and Mr. M.E ALEXANDER DURAI RAJ<sup>2</sup>

**ABSTRACT**

*Transcendent economic here in after shall be defined as a Sustainable, ethical future proof, socially inclusive & progressive economic system for the super national future in sync with the cosmos. It will be the guiding principles for economics. The current economic ecosystem has proved itself to be ineffective and inconsistent. The core causes for its defective and unsustainable nature is that it is not in tune with nature, therefore a new form of economics and economic principles have to be defined. In this paper the researcher has explained the various key factors that contribute to the need of a new sustainable and reliable form of economics and the urgency for the reform is the fatality of the current system which could lead to the extinction of human existence. Therefore the researcher has explained the need for the new eco friendly and sustainable form of economics in the current research paper. In this paper the researcher has deeply studied the current economic system to make necessary changes to bring to light the original and sustainable form of economics. The researcher has used both primary and secondary sources to refer and comprehend the study.*

**Keywords:** transcendent economics, sustainable economics, economic singularity, GDP, GHN.

**Introduction**

The purpose and aim is to create a global eco-friendly, sustainable ecosystem for economics that will provide power, structure and stability for the future. The reason for writing this paper is as follows. Today we are in a very important juncture in the history of civilization. The 4th industrial revolution is characterized by a fusion of technologies that is blurring the lines between the physical, digital and biological spheres, collectively referred to as cyber-physical systems. It is marked by emerging technology breakthroughs in a number of fields, including robotics, artificial intelligence, nanotechnology, quantum computing, biotechnology, the Internet of Things, the Industrial Internet of Things (IIoT), decentralized consensus, fifth-generation wireless technologies (5G), additive manufacturing/3D printing and fully autonomous vehicles.

The 3rd world war, Polar shift, Global warming, Technological singularity and several world religions teach that world events will reach a final climax, leading to end of days. All of

the above point to the existential threat of humankind if we do not redefine the current path. It is hard to think that We live in a binary moment in the history of time, a “0” can mean we are so doomed and a “1” can means we flourish. The strange thing though is to recognize that we can't stall history, and can't stop both from happening. One of them will, yet if we will now, then we can choose the outcome.

It is time we rewrite the constitution of economic structure, from the bases of demand and supply to a more sustainable process performed with thought to its corresponding cosmic aspect. The totality of economics transcends beyond monetary economics. Ignoring the wholeness of economics creates a blind eye to the stereoscopic impact of economics to the cosmos. The obvious mistake is to think the part as a whole. This in turn creates a hole in the ecosystem of economics making it unstable and unsustainable.

As the realization of making bigger and better candles cannot provide bigger and better lighting lead to the invention of light bulbs, so it is a time in the history of civilization to move from conventional economics to transcendent economics From darkness to light. From unreal to real.

### **Research**

My latest research has some stunning discovery on the greatest global crises. the major problems can be zeroed down to illiteracy, poverty and war. Illiteracy creates a mindset of poverty destroying social community. Poverty leads to violence destroying the economy. Glorified violence becomes war, destroying our environment. War will lead to extinction

### **Findings**

All things are mutually dependent like honey and bees. Nature is a extremely just social capitalist. Therefore anything that is not in tune with nature or the cosmic principles cannot be sustainable. The ebbs and flows of crisis situations are regulated by nature's process of evolution. The inconstancy in economic progress can be related to the basic principles of evolution that is the process of natural selection and survival of the fittest.

### **Derivations and recommendations**

As a solution to the setbacks I have now researched and Created the World's Most modern, advanced yet simple solution which can create social economical and environmentally sustainable development by using a cosmic approach. Due to the limited scope of research papers I have explained only the core principles and not gone into the details of its applications however it is self-explanatory.

The primary parameter in evaluating progress of a civilization, year to year has been GDP. Since we cannot justify to limit economics to monetary measures if we want to monitor and measure progress we need to define a new measurement tool which will need to first redefine the term economics.

#### **Economics is currently expressed online as follows:**

1. The branch of knowledge concerned with the production, consumption, and transfer of wealth.
2. The condition of a region or group as regards material prosperity.

#### **Economics should be re-rendered as:**

1. The branch of knowledge concerned with the production, consumption, and transfer of

wealth with relative implication to the cosmos.

2. The condition of a region or group as regards to prosperity.

The term cosmos means the universe seen as a well-ordered whole

Now that we have redefined economics we will have to redefine GDP.

To create a sustainable transcendent economic ecosystem, GDP alone cannot be taken in to consideration therefore i took into consideration gross national happiness index so in order to track and measure the exact progress of a civilization GDP along with GNH has to be considered. Keeping the dualistic nature of GDP and GNH I decided to integrate GDP and GNH into a single measure.

The limitation of GNH is that extremely fluid nature of the term happiness and cannot be easily translated into digital equivalents creating a dead-end. A breakthrough in this limitation is created when we replace the term happiness with the term integrity therefore creating a new term gross national integrity GNI.

### **Integrity**

1. The quality of being honest and having strong moral principles.

2. The state of being whole and undivided.

The challenge of finding the monetary equivalent of integrity of a nation can be overcome by taking into consideration the crime rate of a nation therefore the total cost of the justice mechanism of a nation can be considered as GNM. GNM will include the cost of military and para military forces, legislative cost, judicial cost and the cost of maintaining law and order. The GNM can be reduced by cultivating a epic moral code leading to voluntary compliance to the law among citizens.

However, the introduction of GNM will not make monetary measures of progress, sustainable and complete. Since, sustainable development is made up of three pillars environment, economy and society . In order to make sustainable economic progress, the third factor of environment has to be taken into consideration. The impact of economic and social progress on the environment can be zeroed down to gross non renewable byproducts of GDP hereinafter termed GNRB.

Therefore, to create a sustainable economy we must take into consideration transcendent economics giving birth to a new measure of economic growth called TGDP transcendent gross domestic product.

TGDP will create a cascading effect on reforms leading to obvious new terminologies and social growth indicators such as GWP becoming TWGP and like of such.TGPD will be the true measure of human progress and will bring to light obvious pitfalls in civilization.

This in turn will lead the path to a sustainable economics of the future

### **Conclusion**

Therefore, now, it is the duty of the decision makers, CEOs, scientists and academicians to evolve development and recommend suitable strategy and technology to create a sustainable future in sync with the cosmos based on transcendent economic principles. A whole new world of economic studies and economic reforms will be created as a result of transcendent economics. Transcendent economics is to be the guiding principle by which economic singularity will be attained.
